DETAILED ACTION

Allowable Subject Matter

1. The indicated allowability of claims 57-58 is withdrawn in view of the newly discovered reference(s) to Moore (U.S. Pat. No. 6,587,082) and Akatsuka et al. (U.S. Pat. No. 5,047,754).

Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 57-58 are rejected under 35 U.S.C. 102(e) as being anticipated by Moore (U.S. Pat. No. 6,587,082).

As to claim 57, Moore (figs. 1-3, 10) shows a method of manipulating a graphical display comprising the steps of: providing a first display platform (12) and a second display platform (14 or

16) pivotably connected to each other (col. 5, lines 8-14), a processor (CPU 200) for controlling graphical representations presented on a first display platform and a second display of the second display platform, and a user's input device (mouse 202) to the processor (200). Moore teaches the steps of receiving a user's input to select a first graphical representation displayed on the first display; and activating a program to be viewed on the second display, which program is associated with the selected first graphical representation, respectively as disclosed on page 8, lines 58-67.

As to claim 58, Moore discloses a method, wherein the user's input is received via a mouse (202) connected to a processor (200).

Allowable Subject Matter

4. Claims 1, 3-7, 11-20, 22-25, 31-41, 49-55, 59-68 are allowable. None of the cited references teach about "one auxiliary display platform optically connected to a primary display platform through at least one hinge" and "a motor for selectively rotating at least one auxiliary display platform relative to a primary display platform between an open position and a closed position":
